

Overview

A humorous, single-page chat simulator that lets users "talk" to fake personalities like a pirate, caveman, or cranky grandpa. Uses simple keyword matching to generate themed, funny responses.

Goals

- Provide an entertaining and shareable experience
 - Focus on humor and unique personalities to stand out
 - Keep the interface fun, fast, and mobile-friendly
-

Core Features (MVP)

1. Character Selector

- Pirate, Caveman, Cranky Grandpa

2. Chat Interface

- Text input box
- Bot replies with themed pre-written messages

3. Message Display

- Chat bubbles in a scrollable window
 - Auto-scroll to latest message
-

Stretch Features (Future Updates)

- Export convo as an image (using html2canvas)
 - Sound effects or voice (Web Speech API)
 - More characters (Alien, Angry Cat, AI Therapist)
 - Share convo via link or social media
-

Tech Stack

- HTML, CSS, JavaScript (Vanilla)
 - Optional:
 - localStorage for saved chats
 - html2canvas for export
 - Web Speech API for character voices
-

Starter Characters

1. Pirate

- “Arrr, ye be askin' the wrong question, matey!”

2. Caveman

- “Me no like code. Me smash bug!”

3. Cranky Grandpa

- “Back in my day, we didn’t have none of this Java stuff!”
-

Monetization Ideas

- AdSense placement
- Affiliate links or themed merch (e.g. pirate mugs)
- Premium features (export convo, extra characters)
