

Random Decision Maker – Product Requirements Document (PRD)

Overview

A single-page web app that helps users make fun, random decisions. Users can select from a few categories (e.g. food, activities, movies), click a button, and get a quick, entertaining answer.

Goals

- Provide a playful and useful way to make quick decisions
 - Keep the interface simple, clean, and mobile-friendly
 - Encourage repeat use through fun UX and personalization options
-

Core Features (MVP)

1. Category Selector

- Dropdown or buttons with categories like:
 - "What should I eat?"
 - "Random activity"
 - "Pick a movie genre"

2. Random Output

- Display result in large font (centered)
- Optional delay or basic animation (e.g. fade in)

3. Simple UI

- Fun colors, bold typography, and mobile responsiveness
-

Stretch Features (Future Updates)

- Custom list builder (users input their own options to spin)

- Save favorite spinners (localStorage)
 - Spinning wheel animation or bouncing dice effect
 - Share result as image or URL
 - Embeddable widget for blogs or other sites
-

Tech Stack

- HTML, CSS, JavaScript (Vanilla)
 - Optional libraries:
 - GSAP or anime.js for animation
 - localStorage API for saved spinners
 - html2canvas for image export
-

Starter Categories

1. What Should I Eat?

- Pizza, Tacos, Sushi, Salad, Burger, Sandwich, Ramen, Pasta

2. Random Activity

- Go for a walk, Watch Netflix, Read a book, Take a nap, Clean something, Call a friend

3. Movie Genre Picker

- Action, Comedy, Drama, Sci-Fi, Horror, Romance, Documentary
-

Monetization Ideas

- **AdSense / display ads**
 - Place near category picker or result output
- **Printables & downloads**

- Sell themed printable decision wheels (e.g. kids' chores, couple's date night ideas)
- **Affiliate links**
 - Tie outputs to products (e.g. "Eat Sushi" → sushi-making kit affiliate link)
- **Premium version**
 - Save unlimited spinners, remove ads, add custom themes
- **Branded versions**
 - Niche-specific: parenting site spinner, classroom use, etc.
