Random Decision Maker - Product Requirements Document (PRD)

Overview

A single-page web app that helps users make fun, random decisions. Users can select from a few categories (e.g. food, activities, movies), click a button, and get a quick, entertaining answer.

Goals

- Provide a playful and useful way to make quick decisions.

- Keep the interface simple, clean, and mobile-friendly.

- Encourage repeat use with fun design and stretch features.

Core Features (MVP)

1. Category Selector

- Dropdown or buttons with categories:

- "What should I eat?"

- "Random activity"

- "Pick a movie genre"

2. Random Output

- Display result in large font (centered)

- Add a short delay or animation for effect

3. Simple UI

- Fun colors and bold typography

- Works well on desktop and mobile

Stretch Features (Future Updates)

- Custom list builder (user inputs their own options)

- Save spinners to localStorage

- Spinning wheel or dice animation

- "Share your result" button or image export

- Embeddable spinner widget for other sites

Tech Stack

- HTML, CSS, JavaScript (Vanilla)

- Optional: GSAP or anime.js (for animation), localStorage API

Starter Categories

1. What Should I Eat?

- Pizza, Tacos, Sushi, Salad, Burger, Sandwich, Ramen, Pasta

2. Random Activity

- Go for a walk, Watch Netflix, Read a book, Take a nap, Clean something, Call a friend

3. Movie Genre Picker

- Action, Comedy, Drama, Sci-Fi, Horror, Romance, Documentary
